

First International Workshop for the Design of the ANDES Underground Laboratory

Centro Atómico Constituyentes, Buenos Aires, Argentina, 11-14 April 2011

The construction of the Agua Negra tunnel between Argentina and Chile gives the scientific community a unique opportunity to build an underground laboratory 1750m deep under the Earth surface in the southern hemisphere. The opening of the ANDES underground laboratory would be following the one of the Agua Negra tunnel in 2018, but its design has to be finalized in 2011.

The First International Workshop for the Design of the ANDES Underground Laboratory is a call to the international community in order to plan the laboratory according to the growing needs of underground experiments.
